Lottery Game

In this game you will be playing multiple lottery games, where the winning ball can either be black or white

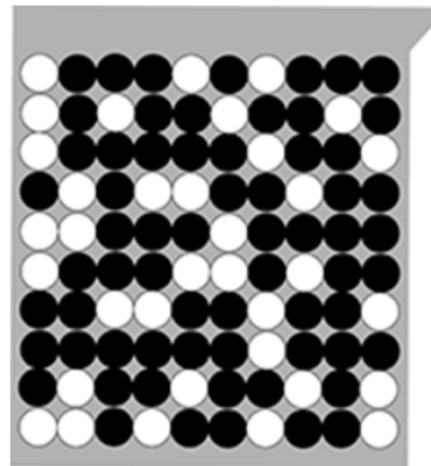

Next

Ball Rack

In each game the machine will be filled with black and white balls.
Sometimes there will be more white balls, sometimes more black balls.

Both of you together will place your bets on either the white or the black ball.

Back

Next

Advisers

You will not be able to see the rack of balls.

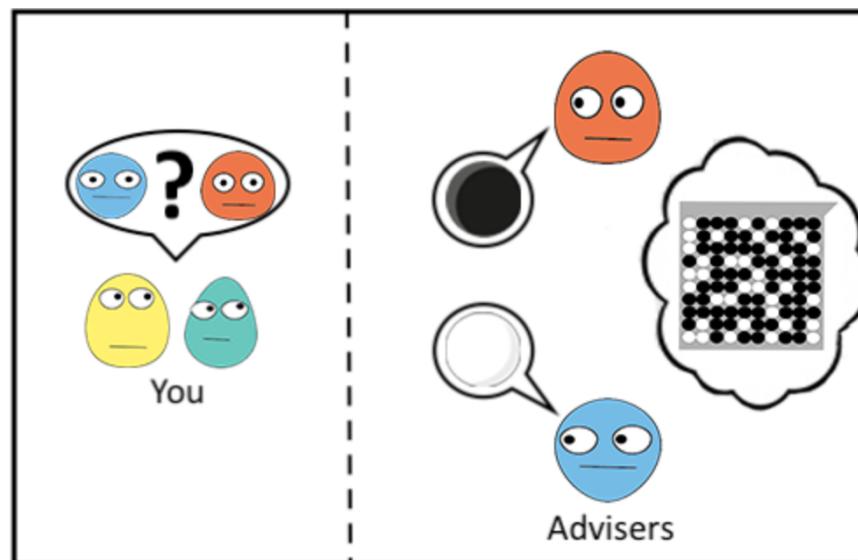

Instead, you will have to rely on the advice of two advisers.

Both advisers saw a part of the rack of balls before making their predictions.

At the start of each trial you both will have to decide which adviser to follow.

Please discuss it with each other before making the decision together.

You will then follow the advice of the selected adviser.

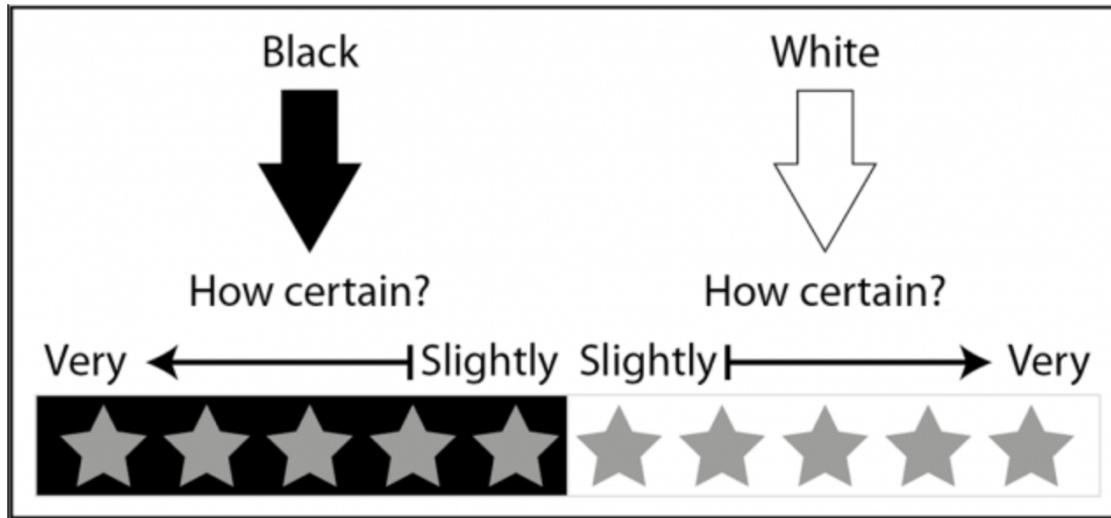

Back

Next

Confidence Scale

Advisers will give their predictions using the following confidence scale

Back

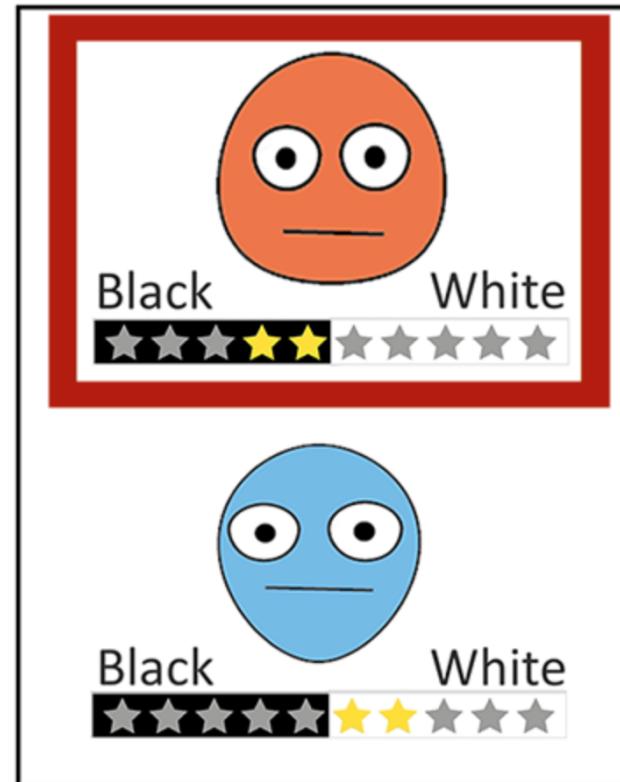

Next

Advice

Both advisers will give their advice for the winning ball using the confidence scale.

You will bet on the advice of the selected adviser.

In this case the selected adviser advises to bet on black, therefore you will bet on the black ball.

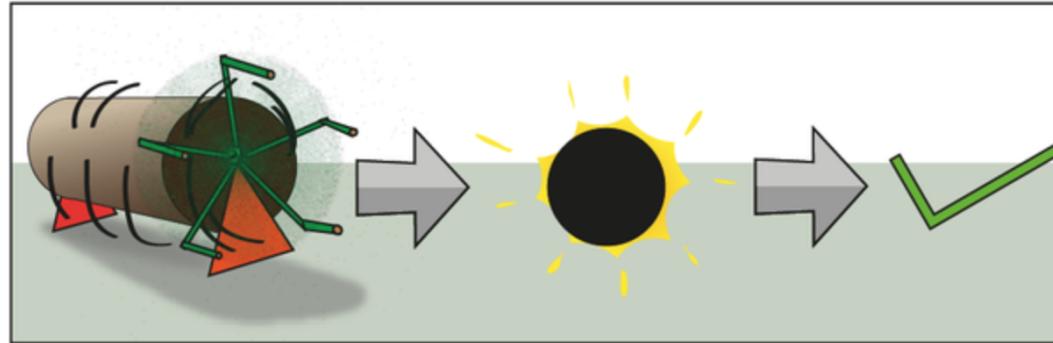

Back

Next

Lottery Outcome

Finally, one ball will be drawn and you will see if the bet was successful.

Every time you win, you will get a bonus of €0.10 each.

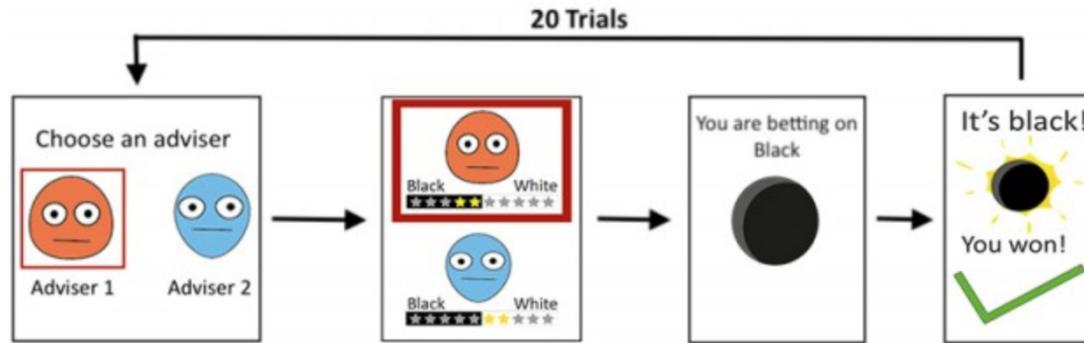

Back

Next

Trials

After the lottery outcome, the next trial starts.

There will be 20 trials in total.

You are required to take a quiz with comprehension questions before starting the experiment.

Click the button below to start the quiz or go back to read the instructions.
